KIMQ8550 UPDATE OS BY FASTBOOT

1. Preparation

- A computer that install adb and fastboot tool from SDK Platform Tools release notes | Android Studio
- Google USB driver from Get the Google USB Driver | Android Studio (Windows computer usually need this driver to recognize fastboot devices, please follow this video guide Install fastboot driver.mp4)
- KIMQ Fastboot OS images that shared from HSPTek
- USB Type-C cable

2. Flash

2.1. Boot device into fastboot mode

- Connect type-c cable into type-c connector on KIMQ, then execute bellow command:
  adb devices # Return KIMQ serial
  adb root
  adb reboot bootloader

  Then please check:
  fastboot devices # Return KIMQ serial (For Windows PC, user may need install fastboot driver as noted at Preparation)

2.2. Flash

NOTE: All data on device will be lost, please backup data first.

fastboot flash abl_a abl.elf
fastboot flash abl_b abl.elf
fastboot flash dtbo_a dtbo.img
fastboot flash dtbo_b dtbo.img
fastboot flash boot_a boot.img
fastboot flash boot_b boot.img
fastboot flash system system.img
fastboot reboot

After that, device will boot into the new OS!
